Education

Carleton University

Bachelor of Engineering (B.Eng.) - Computer Systems Engineering

Ottawa, ON

Expected Apr 2029

Experience

Electrical Subteam Member | Carleton Planetary Robotics Team

Sept 2025 - Apr 2026

- Redesigned the team's robot control base station PCB in Altium, making the **STM32-based board** more modular and easier to revise.

Projects

ClashRecruit | [Website](#)

[GitHub](#)

Python, Flask, Celery, MongoDB, JavaScript, React, AWS EC2

- Built and deployed a full-stack Clash of Clans recruitment platform on **AWS EC2** with a React frontend, Flask REST API, and MongoDB-backed listing system.
- Enabled authenticated users to create, renew, and manage clan recruitment listings by designing session-backed Flask API endpoints.
- Reduced repeated Clash API requests from every user interaction to once per **24 hours** by caching unsupported Town Hall metadata.
- Automated listing cleanup and clan count refreshes using MongoDB TTL indexes and Celery Beat jobs scheduled every **5 minutes**.

CourseTrack | CTRL-HACK-DEL 2.0 Hackathon

[GitHub](#)

Python, Flask, MongoDB, OpenRouter, Google Calendar API

- Built a syllabus-to-calendar workflow that converts uploaded course syllabi into reviewable event data and exportable **.ics** files.
- Designed Flask endpoints to handle syllabus uploads, trigger parsing workflows, and return structured assignment and deadline data for frontend review.
- Reduced duplicate AI parsing work by storing SHA-256-keyed syllabus metadata in **MongoDB** and reusing prior extraction results for repeat uploads.
- Integrated **OpenRouter** to extract structured event JSON and **Google OAuth 2.0** to sync approved events to Google Calendar.

WatchDog | 2nd Place Overall, Dev0 Hackathon

[GitHub](#)

Python, Kotlin, WebSockets, OpenCV

- Built a WebSocket-based backend to stream device status updates every **0.2 seconds** and receive remote lock commands from the client app.
- Implemented threat confirmation logic with automatic intruder snapshots and optional JSON alerts triggered after a **3-event streak** with a **10-second cooldown**.
- Implemented a Windows workstation locking mechanism that locked the device in response to confirmed threats and remote client commands.

Skills

Languages: Python, Java, C, JavaScript, Kotlin, HTML/CSS, Bash

Tools/Frameworks: Git, React, Docker, Linux, AWS EC2, MongoDB, Flask, Celery, WebSockets, Altium
